

## **POISON IVY**

*There is poison ivy in various areas of the park. It may be found growing along the ground or climbing trees. Poison ivy is a native to the area. Eliminating it is impossible as methods (chemicals or burning) would pose harm to the environment. These methods are also temporary and the plant would only come back.*

*The best defense is to know what poison ivy looks like and avoid coming in contact with it. Staying on the trails is safest way to avoid contact.*
